JOB MARKET PAPER

“An Empire Lost: Spanish Industry and The Effect of Colonial Markets and Trade on Innovation”

Abstract: I study how accessing new (international) markets affects innovation direction. To do so, I use two historical experiments on the textile industry in Spain at the end of the 19th century. I provide causal evidence on how international trade’s patterns enhanced biased technical improvements. Although each shock meant access to new markets to Spanish cotton textiles, their effect on innovation differed because the change on demand characteristics was not the same. First, after Spain effectively forced their colonies to buy manufactured cotton goods in 1891, I document an increase in innovation destined to create cotton textiles. Second, after the Spanish-American war and the unexpected loss of these captive markets, I find a change inside the cotton industry towards weaving innovation. After the 1898 war, and with an already installed capacity, cotton industrialists were forced to enter and compete in international markets that demanded more sophisticated fabrics. Using novel archive data from a big cotton firm, I evaluate the mechanism that explains my results. I show that changes in intermediate goods relative prices explain the type of innovation developed. Finally, I show that these new incentives on innovation translated directly into the adoption of new mechanized tools in the sector. I find evidence of increased industrial technology with a rise in mechanized cotton looms used in Spain after 1900.
